2

- OFX MOVING AVERAGE CROSSOVER INDICATOR

3

- OFX BUY/SELL SIGNAL ALERT

4

- OFX 2LINE MOVING AVERAGE MACD INDICATOR

5

- OFX CCI INDICATOR

# 1. SIGNAL BAR INDICATOR

OFX Clients can select which Timeframes they want displayed and the indicator can now be placed into any indicator window to help free up chart space.

The Price color updates with the direction of price movement, UP = Lime / DN = Red / Flat = Orange

# 2. OFX MOVING AVERAGE CROSSOVER INDICATOR

The OFX Moving Average (MA) CrossOver Indicator shows the average value of security's price over a period of time. When calculating a MA, a mathematical analysis of security's average value over a predetermined time period is made. As the security's price changes, its average price moves up or down. The MA indicator prompts you two parameters. A shorter MA and a longer MA. See chart above for more information.

### 3.OFX BUY/SELL SIGNAL ALERT

The OFX Buy/Sell Signal is an Incredible forex signal generator program that shows OFX's clients when to buy and when to sell. See Chart above for more information.

### 4.OFX 2LINE MOVING AVERAGE MACD INDICATOR

The Indicator standard settings: 12, 26, 9(Best Performance)  
Any time frame as well as any currency pair can be used.

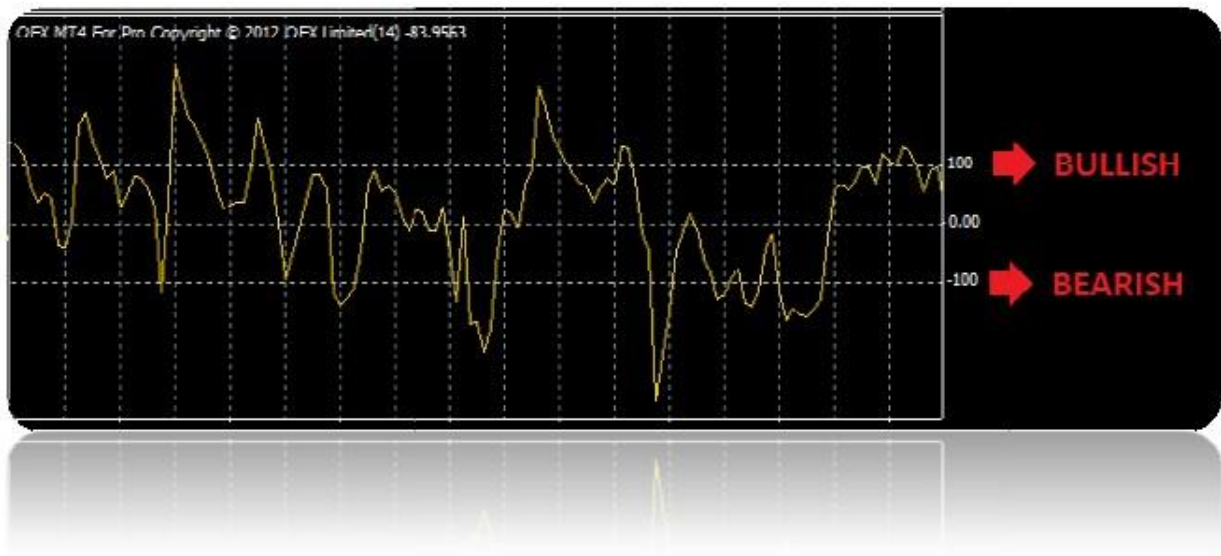

Entry rules: When the Indicator crossover appears – enter (or wait for the price bar to close and then enter).

Exit rules: When the Indicator lines next crossover occurs.

Very simple approach and can give good profitable entries. OFX Clients can change the default settings depending on the currency and chosen time frame. For example, traders may test: USD/CHF MACD (04, 07, 16), EUR/USD MACD (02, 03, 20), GBP/USD MACD (02, 03, 04) for different time frames.

This Indicator has little use in sideways trading market. It is also never used alone, but rather in combination with other indicators.

## 5. OFX CCI INDICATOR

Developed by OFX Limited, the indicator consists of a single line which oscillates between  $\pm 200$ .

This Indicator was created to identify bullish and bearish market cycles as well as to define market turning points, market strongest and weakest periods.

Designed for OFX Clients, the indicator has quickly found its application in other markets including Commodities.

The author advises to use this indicator for entries and exits once it reaches  $\pm 100$ . It goes as follows: 100. When the indicator goes above +100, there is a strong uptrend confirmed, therefore traders should open a Buy position.

The trade is held as long as the indicator trades above +100. Exits will be made when it goes back below +100. Opposite true for downtrends and readings below -100.
